Subject: FW: Green belt sales pitch

Please place in letters to the Council

Once again the City has decided to do a sales pitch for the green belt infiltration project. The projects to tour are by Tera Tech . The Manhattan project is nowhere the size of the Hermosa proposal and the other two are slightly larger than the Hermosas. The interesting fact is that all three of these projects are not surrounded by residential home nor being built over a liquefaction zone or subject to ground water level rises . The City has decided to have this tour on a weekday when residents are working ,getting children ready for the school year and we must provide our own transportation. Also don't forget to bring your sturdy shoes, an orange vest and hard hat . The take the rest of the day driving all afternoon to these sites. The City has not picked a site yet but this is again a means saying the city has reached out to the residents. Sorry why can't this be held on a Saturday when residents can attend and maybe the city could supply a bus to visit these sites.

Thanks for the no transparency
